SUMMARY

I am a results-driven AI Engineer and Full Stack Developer with expertise in building scalable AI-powered applications and managing project lifecycles. My experience includes strong skills in machine learning, NLP, and web development using React and Python. I have a proven capability to lead projects, optimize workflows, and deliver high-impact solutions while leveraging data-driven decision-making and agile methodologies

KEY ACHIEVEMENTS

Crop Recommendation Excellence
Improved crop recommendation accuracy by 20% in AI project.

Enhanced ML Models
Reduced analysis time by 60% through efficient workflows.

Automated Meeting Summaries
Achieved 85% accuracy in water quality prediction model.

NLP Customer Insights
Enhanced skill recommendations relevance by 25% using AI models.

EXPERIENCE

AI/ML Intern

Infosys Springboard

01/2025

Internship focused on AI/ML applications

- Processed and cleaned 1000= customer feedback records using Python (Pandas), reducing missing and duplicate data by 30%
- Built a computerised customer insights pipeline using NLP techniques, extracting 10–15 key themes for decision-making
- Reduced manual data analysis time by 60% through automation of preprocessing and extraction workflows

AIML Intern

Edunet Foundation

01/2024 - 12/2024

Internship focused on AI/ML applications

- Evaluated and compared 3+ ML algorithms, selecting optimal models based on accuracy and efficiency
- Utilized feature engineering and data preprocessing techniques, increasing prediction reliability by 15%
- Documented experiments and results using GitHub, improving reproducibility and project transparency

EDUCATION

B.Tech in AI & ML

Parul University

07/2023 - 06/2027

C.G.P.A 8.3

CERTIFICATIONS

AI Engineering Professional Certificate - IBM

Machine Learning Specialization – DeepLearning.AI (Coursera)

Frontend Developer Professional Certificate - Meta

Google Project Management Certificate – Google

SKILLS

Node **GitHub** **NLP** **React** **Python** **Agile** **JavaScript** **HTML** **CSS** **REST** **Pandas**

Scikit -Learn **Git** **ML Algorithms** **Deep Learning** **IBM**

PROJECTS

Smart Crop (SIH Hackathon)

AI-based crop recommendation system

- Led development of an AI-based crop recommendation system using Python and Machine Learning, improving crop selection accuracy by 20% on test datasets
- Built data preprocessing pipelines using Pandas, reducing noisy agricultural data by 30%
- Created scalable decision workflows, reducing manual analysis effort for farmers by 40%
- Coordinated team tasks and project delivery, ensuring 100% on-time submission during hackathon

Skill Sense AI

AI-powered skill analysis platform

- Enhanced an AI-powered skill analysis platform using Python and ML models, improving recommendation relevance by 25%
- Implemented structured data pipelines to process user inputs, handling 100+ test cases efficiently
- Employed feature engineering techniques to enhance model performance by 15%
- Integrated frontend interface using React, improving user interaction experience
- Live: https://skillsense.vinayk.in/

Extracting User Insights

NLP-based customer feedback analysis

- Built an NLP-based pipeline using Python (Pandas, NLP techniques) to process 1000+ customer feedback records
- Reduced duplicate and missing data by 30% through automated preprocessing
- Extracted 10–15 key behavioral insights, enabling data-driven decision-making
- Systematised analysis workflow, reducing manual processing time by 60%
- Live: https://projects.vinayk.in/

Local Mind OS (Offline LLM)

Offline AI assistant with local LLM models

- Engineered an offline AI assistant using local LLM models, enabling 100% offline functionality without cloud dependency
- Optimized model inference performance, reducing response latency by 30%
- Designed privacy-focused architecture, ensuring secure local data processing
- Integrated system components using Python, improving execution efficiency

Minutes of Meeting AI

NLP-based meeting summarization system

- Built an NLP-based meeting summarization system using Python, reducing manual documentation effort by 70%
- Generated structured summaries including key decisions and action items, improving clarity by 50%
- Mechanised text processing workflows, reducing summarization time by 60%
- Planned reusable output templates for consistent meeting reporting

Water Quality Prediction

Machine learning model for water quality prediction

- Developed a machine learning model using Scikit-learn, achieving 85–90% prediction accuracy
- Evaluated and compared 3+ algorithms, improving baseline performance by 12%
- Put into practice feature engineering and data normalization, enhancing model reliability by 15%
- Processed structured datasets using Pandas, ensuring high-quality input data
